

Dear Sir or Madam:

I am currently a graduate student at the University of Colorado at Boulder and will be completing a Master of Science in Electrical Engineering in May 2007. I am highly motivated and intelligent and am seeking a career that will challenge me.

My foremost interests and abilities are in the areas of digital signal processing, communications, and embedded systems, but I am open to anything requiring problem solving and analytical thinking. I am self-motivated, requiring minimal direct guidance to complete a task and have a strong work ethic, often completing assignments well in advance of a deadline. I work especially well in a team environment, assisting or leading the team to achieve common goals.

I am specifically seeking a position that would involve research and/or development in embedded systems and signal processing with the opportunity to develop new protocols, methods, or applications for communications. The ideal position would offer the opportunity for advancement to project management.

I would welcome the opportunity to meet with you personally to discuss on-going or upcoming projects, and would appreciate any assistance or suggestions you could provide. Thank you for your interest.

Sincerely,

Marc Kessler
